Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

(Previously Presented) A fuel cell system comprising:
a fuel cell;

an exhaust gas passage for allowing an exhaust gas from the fuel cell to flow through; and

an impurity removal member placed in the exhaust gas passage for removing impurities contained in moisture particles mixed in the exhaust gas;

wherein the impurity removal member is capable of exchanging ions.

- 2. (Original) The fuel cell system according to claim 1, wherein the impurity removal member is provided in the exhaust gas passage of a hydrogen circulation system.
- 3. (Currently Amended) The fuel cell system according to elaim 1 or 2, claim 1, wherein a gas-liquid separator is provided in the exhaust gas passage, and the impurity removal member is placed on the inside wall surface of the gas-liquid separator.
- 4. (Currently Amended) The fuel cell system according to elaim 1 or 2, claim 1, wherein a gas-liquid separator is provided in the exhaust gas passage, and the impurity removal member is placed in such a manner that a space is formed between the inside wall surface of the gas-liquid separator and the outside surface of the impurity removal member.
- 5. (Currently Amended) The fuel cell system according to claim 3 or 4, claim 3, wherein the impurity removal member is configured so that it increases a flow resistance the closer it is to a gas outlet of the gas-liquid separator.
- 6. (Currently Amended) The fuel cell system according to elaim 1 or 2, claim 1, wherein a gas-liquid separator is provided in the exhaust gas passage, and the impurity removal member is located downstream from the gas-liquid separator.

- 7. (Currently Amended) The fuel cell system according to any one of claims 1 to 6, claim 1, wherein the impurity removal member is treated to make it water-repellent.
- 8. (Original) The fuel cell system according to claim 7, wherein a water-repellent member is placed on the outside surface of the impurity removal member.
- 9. (Original) The fuel cell system according to claim 7, wherein the impurity removal member is put in a container made of a water-repellent member.
- 10. (Currently Amended) The fuel cell system according to any one of claims 1 to 9, claim 1, wherein an accommodating member capable of changing its shape in response to changes in the volume of the impurity removal member is provided.
- 11. (Original) The fuel cell system according to claim 10, wherein the accommodating members are distributed in the impurity removal member.
- 12. (Currently Amended) The fuel cell system according to claim 10 or 11, claim 10, wherein the accommodating member is placed around the outside surface of the impurity removal member.
- 13. (Currently Amended) The fuel cell system according to any one of claims 10 to 12, claim 10, wherein the accommodating member is made of a porous material.
- 14. (Original) The fuel cell system according to claim 10 wherein the impurity removal member is provided inside the gas-liquid separator, and the accommodating member includes an elastic member and is located at a position outside the gas-liquid flow path of the gas-liquid separator.
- 15. (Currently Amended) The fuel cell system according to any one of claims 1 to 14, claim 1, wherein the impurity removal member contains an ion exchange resin.
- 16. (Previously Presented) The fuel cell system according to claim 4, wherein a space that is open and extends from the lower part of the gas-liquid separator to its top and

connected to a circulation passage is formed in the approximate central part of the impurity removal member.

- 17. (Currently Amended) The fuel cell system according to any one of claims 3 to 16claim 3, wherein the gas-liquid separator separates a gas-liquid mixture fluid into a gas and a liquid by swirling the gas-liquid mixture fluid.
- 18. (Previously Presented) The fuel cell system according to claim 15, wherein the ion exchange resin is put in a resin case with openings.
